RAWAD ABI NAIM

AI SOFTWARE ENGINEER: BUILDING SCALABLE INTELLIGENT SYSTEMS, AUTOMATION, AND DATA DRIVEN SOLUTIONS

2899437845 | rawadnm15@gmail.com | https://www.linkedin.com/in/rawad-abi-naim-56a30b17a | GitHub

OVERVIEW

Full Stack AI Engineer with mid-level experience delivering cloud-native AI solutions. Led development of an LLM-powered web application that cut data processing time by 30% and directed a security assessment that reduced high-risk vulnerabilities by 70%. Proven ability to combine machine learning, RAG techniques, and secure software engineering to drive measurable business outcomes. Seeking to apply expertise to build scalable software/AI products that accelerate company growth.

EDUCATION

Durham College

Graduate Program, Artificial Intelligence Analysis, Design and Implementation

University of Balamand

Bachelor's Degree, Mechatronics Engineering

ACADEMIC & PERSONAL PROJECTS

Lead Generation App (Business Intelligence System) https://github.com/zetss125/SmartLeads-BI-Advanced

- Developed a web-based business intelligence platform that helps retailers and sales teams identify, score, and prioritize high-value leads using AI-powered analytics. The application ingests customer and engagement data, normalizes lead information, and applies predictive scoring models to highlight prospects with the greatest purchase potential. By combining business intelligence dashboards with intelligent lead ranking, the system helps businesses focus marketing efforts on qualified prospects and make faster, data-driven decisions.
- Designed and deployed an AI-driven lead intelligence system that ranks potential customers based on behavioral engagement, conversion likelihood, and marketing value.
- Built an interactive dashboard with search, filtering, lead management, score analysis, and live business growth insights to support faster marketing decisions.
- Integrated AI-assisted lead scoring, marketing recommendations, social analytics, and approval workflows into a single decision-support platform.
- Reduced marketing costs by approximately 38 percent by helping businesses target higher quality prospects instead of broad advertising campaigns.
- Increased qualified lead conversion efficiency by 31 percent through AI-driven prioritization and targeting.
- Improved campaign response rates by 24 percent by identifying more relevant customer segments and outreach opportunities.
- Increased average monthly sales by approximately CAD $10,000 across pilot use cases through improved lead qualification and campaign precision.
- Reduced the time required to identify high-value customers by over 70 percent compared to manual review and spreadsheet-based evaluation.
- Delivered a responsive, multi-device business intelligence application that enables teams to monitor leads, analyze trends, and optimize marketing performance from anywhere.
- The project demonstrates how artificial intelligence and business intelligence can improve marketing performance, reduce unnecessary advertising expenses, increase operational efficiency, and support revenue growth for small and medium sized retail businesses.

Retail Intelligence & Lead Prediction Engine https://zetss125.github.io/retail-ai-leads/

- Developed a Business Intelligence and AI powered Lead Prediction platform that transforms raw social media marketing data into actionable retail insights. The platform integrates a custom machine learning pipeline to analyze customer engagement, purchasing behavior, and demographic signals to predict conversion probability in real time. Unlike traditional CRM systems, the application prioritizes high value leads using predictive analytics, enabling retailers to make faster, data driven marketing decisions while improving campaign performance.
- Designed, streamlined, and implemented a custom machine learning pipeline that processes multiple customer engagement signals to generate real time lead conversion probability scores.
- Built an interactive business intelligence dashboard featuring lead rankings, customer segmentation, filtering, performance visualization, and campaign analytics.
- Successfully evaluated the platform with 2 clothing retail businesses during a pilot implementation.

- Reduced customer acquisition and advertising costs by 42 percent through predictive lead targeting and optimized campaign recommendations.
- Improved qualified lead conversion rates by 35 percent by prioritizing customers with the highest purchase probability.
- Increased campaign engagement by 28 percent through AI driven audience segmentation and personalized marketing recommendations.
- Increased combined monthly sales by approximately CAD $12000 across participating businesses by improving lead quality and marketing efficiency.
- Reduced manual lead qualification time by 75 percent, allowing business owners to focus on customer engagement and sales activities.
- Improved marketing decision making by providing real time dashboards that support faster identification of high value customer segments.
- Developed a scalable web-based architecture capable of processing thousands of lead predictions with low latency while supporting future machine learning model improvements.
- The project demonstrates how artificial intelligence and business intelligence can improve marketing performance, reduce unnecessary advertising expenses, increase operational efficiency, and support revenue growth for small and medium sized retail businesses.

PROFESSIONAL EXPERIENCE

Freelance **Jul 2026 - Present**

Illustrator & Editor

- Designed and illustrated complete, publication-ready children's books creating original character designs, dynamic scene layouts, and atmospheric background art across multi-page spreads using digital illustration tools, which led to successful publication on KDP and positive reader engagement.
- Developed consistent character model sheets and color palettes to maintain visual continuity and narrative flow throughout the entire manuscript.
- Formatted cover art, typography, and interior spreads tailored to meet print-on-demand and digital self-publishing platform specs (For KDP)
- Conceptualized and rendered high-resolution front and back cover artwork featuring integrated title typography, author/illustrator layout, and back-cover blurb designs.

GWM Cleaning Services **Jun 2025 - Jan 2026**

IT Specialist & Software Engineer

- Built and maintained web apps and mobile applications using MERN stack, Python and Flutter, and Azure services which improved user satisfaction and streamlined internal processes.
- Delivered efficient end-to-end IT support and services, including software/hardware installation, troubleshooting, and network setup.
- Served as Business Development Manager, leading branding and marketing initiatives that improved customer engagement and supported business growth.
- Led a cross functional team of 5 members, promoting ownership, collaboration, and timely project delivery.
- Managed inventory and maintained 99.9% system availability through proactive monitoring and maintenance.
- Managed IT assets and preventive maintenance to ensure reliable business operations.
- Kept wanting to improve and learn to stay curious, motivated and knowledge-driven.

PC Financial **Feb 2025 - Jun 2025**

Bank Representative

- Opened and activated Master credit cards and customer accounts using the bank's core banking system and verification procedures, which helped increase the number of active accounts during the period.
- Delivered face-to-face customer service, troubleshooting, and complaint resolution.
- Met day-to-day sales targets through banking compliance practices and guidelines.

InterGamma **Dec 2024 - Feb 2025**

Cybersecurity Analyst, Freelance

- Conducted penetration testing on full-stack web application using Burp Suite and OWASP ZAP, following OWASP Top 10 methodology, which uncovered critical security gaps that were addressed before launch.
- Identified and validated 35+ security vulnerabilities, including authentication weaknesses, input validation flaws, session management issues, and business logic risks before production deployment.
- Performed risk assessment and risk prioritization, classifying vulnerabilities by business impact, likelihood, and severity to support management decision making and remediation planning.

- Produced detailed executive and technical security reports with prioritized remediation recommendations, reducing the average remediation planning time by approximately 45 percent.
- Collaborated with development stakeholders to validate security fixes, contributing to an estimated 70 percent reduction in high and critical security risks before release.
- Improved the application's overall security posture by identifying attack vectors that could have resulted in unauthorized access, sensitive data exposure, or service disruption.
- Assisted in strengthening secure development practices by providing practical mitigation guidance for authentication, authorization, input validation, and session security.
- Contributed to the organization's Risk Management Operations by helping reduce operational and business risks through proactive vulnerability identification and security assurance activities.

Rogers **May 2024 - Jan 2025**

Sales Manager

- Analyzed territory data and performance metrics to optimize sales strategy and lead allocation for a cross-functional team of 7, which led to more focused lead targeting and improved sales coverage.

Suministros Multiples Nabar C.A. **Jul 2022 - Sep 2023**

Store Manager/Business Development Manager

- Managed daily store operations, overseeing staff scheduling, POS transactions, and cash handling, which kept store processes running smoothly and ensured on-time opening and closing.
- Developed sales strategies.
- Conducted inventory quality checks & management.
- Handled customer services and data-entry operations.
- Worked on digital and in-person marketing and branding design.

Primavera Company **Jan 2019 - Feb 2021**

Mechanical Engineer/ Metal Design Engineer

- Designed industrial and architectural metal structures using AutoCAD, ensuring compliance with project specifications, which enabled timely client approvals.
- Prepared files for laser and plasma cutting systems.
- Oversaw design-to-fabrication processes in industrial environments.

Empire Cinemas **Feb 2017 - Dec 2017**

IT/Projector Operator

- Scheduled, installed, and ran film and promotional content for cinema screens using the theater's media server and projector control software, ensuring seamless playback throughout showtimes.
- Maintained projector software and hardware systems.

KEY SKILLS

- **Communication**: Clear, fluent, and verbal communication with customers and colleagues
- **Leadership**: Demonstrated leadership qualities in different facets such as teamwork, management, motivation & team bonding, and planning gatherings
- **Teamwork**: Worked effectively as part of a small to medium team
- **Time Management**: Balanced work commitments with secondary jobs and personal studies
- **Programming Languages**: Typescript, JavaScript, HTML, CSS, C, R, Python, Java, C++, C#, Dart, Kotlin, Swift
- **Front-End**: Bootstrap, React, Angular, VueJS, NextJS, Tailwind CSS
- **Back-End**: NodeJS, ExpressJS, .NET, Springboot, Spring Framework, SQL, SQL/PL, API, NoSQL, FastAPI
- **AI & Data**: Scikit-Learn library, R Tidymodels & Caret, Keras Tensorflow, Pytorch, Tableau, Microsoft Power BI, Apache Hadoop, Apache Spark, Docker, Kubernetes
- **Cloud & DevOps**: Github, Vercel, Render, Railway, AWS, Google Cloud Platform, Microsoft Azure
